SUMMARY

Full-stack engineer specializing in AI-powered, multi-tenant systems. I design and integrate RAG pipelines, LLM agentic workflows, and stateless orchestration that connect language models to real business data, and build the full stack around them across React, Next.js, NestJS, Node.js, and PostgreSQL with clean REST APIs.

EDUCATION

B.Tech in Computer Science

Bharath Institute of Higher Education and Research, Chennai

CGPA: 8.1/10

Expected 2026

TN, India

SKILLS

AI / LLM	RAG pipelines, tool/function calling, agentic workflows, prompt engineering, text-to-SQL agents, LangChain; LLMs: Anthropic, OpenAI, Gemini
Languages	TypeScript, JavaScript (ES6+), Python, SQL
Frontend	React.js, Next.js, Module Federation, Tailwind CSS
Backend	NestJS, Node.js, Express.js, REST APIs, Prisma, Drizzle
Databases	PostgreSQL, MySQL
Authentication	Clerk (OAuth 2.0 / OIDC), JWT, Keycloak
Tools	Git, GitHub, Webpack

EXPERIENCE

Software Engineering Intern — Five Data Products and Solutions Pvt. Ltd. Feb 2026 – Present

- Architected and built a self-service, multi-tenant analytics dashboard, integrated into the company platform as a Webpack Module Federation remote with per-tenant data isolation.
- Built a no-code query builder for non-technical users to create live charts without SQL, with a drag-and-drop designer, multiple chart types, column whitelisting, and UI-driven joins.
- Integrated an AI natural-language layer (RAG pipelines plus a LangChain data dictionary and a tool-calling SQL agent) and owned its stateless orchestration across the React and Node/Express stack.
- Designed clean REST APIs and modular NestJS services with secure Keycloak and JWT authentication for multi-tenant isolation.

Web Developer Intern — Solar Secure Solutions (MSME – Govt. of India) Feb 2025 – Mar 2025

- Developed secure REST APIs and responsive frontend flows for reliable client-server data exchange.
- Implemented server-side validation and authentication flows to ensure application integrity.

PROJECTS

CareerFlow — Serverless ATS-Lite Job Recruitment Platform [\(Link\)](#)

- Built a full-stack applicant tracking system with candidate and recruiter workflows, OAuth, resume uploads, notifications, and real-time application tracking via Convex reactive queries.
- Optimized the frontend with lazy loading, virtualized lists, request deduplication, optimistic UI updates, and PWA caching for offline browsing.

Cosypos — Restaurant Point of Sale System [\(Link\)](#)

- Built a full-stack restaurant POS with real-time orders, inventory, reservations, staff attendance, and JWT 3-tier role-based access for Admin, Staff, and User.
- Cut load time from 15–20s to under 6s via query optimization, indexing, connection pooling, and ETag caching across 11 Prisma models.

ACHIEVEMENTS

Competitive Programming: 3-star coder on CodeChef with a strong Data Structures & Algorithms foundation, 1600+ problems solved, 400+ day streak ([brainstorm_69](#)).

Academic: JEE Mains 2022: 88.04 percentile, All India Rank 15411 / 1.2M candidates.
